

RCIS STABLE EQUITY RETAIL HEDGE FUND

30 June 2024

GENERAL INFORMATION

Investment Manager	Abax Investments Proprietary Limited
Management Company	RealFin Collective Investment Schemes (RF) Proprietary Limited ("RCIS")
Inception Date	01 February 2015
CIS Establishment Date	01 October 2016
Fund Class	Class D1
JSE Code	RCSD1
ISIN Number	ZAE000262325
Fund AUM	R147.811 Million
NAV Price	171.0382 (CPU)
Fee Class Units	43 304 804.39
Fund Category	CIS Retail Hedge Fund
Structure	Registered SA CIS in Hedge Funds
Risk Profile	Medium
Benchmark	South African Short Term Fixed Interest Rate - Call Deposit Index (STEFOCAD) on a rolling 12 month basis
Minimum lump sum	R 100,000.00
Additional lump sum	R 20,000.00
Subscriptions	Each business day
Redemptions	Each business day
Portfolio Currency	ZAR
Portfolio Valuation	Each business day
Transaction Cut-Off Time	12h00 on each business day
Initial Fee	None
Annual Management Fee	1.00% (ex VAT)
Annual Performance Fee	20.00% (ex VAT)
Total Expense Ratio (TER)*	2.63%
Transaction Cost (TC)*	0.63%
Total Investment Charge (TIC)*	3.26%
Income Distribution	First day of March of each year
Value Distributed	4.1045 cents (1 March 2024)
Administrator	Apex Fund Services (Pty) Ltd
Prime Broker	RMB
Trustee	FirstRand Bank Limited (acting through its RMB Trustee Services Division)
Auditor	PricewaterhouseCoopers

* TER, TC and TIC as at 31/03/2024

* Pricing is available daily via Finswitch

RISK RATING

LESS THAN 1 YR | 1 - 3 YRS | 3+ YRS | 3 - 5+ YRS | 5+ YRS

Medium

- These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios.
- In turn the expected volatility is higher than low risk portfolios, but less than high risk portfolios.
- The probability of losses are higher than that of the low risk portfolios, but less than the high risk portfolios.
- Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

INVESTMENT OBJECTIVE

RCIS Stable Equity Retail Hedge Fund is a low volatility Long/Short South African Equity Fund. The Portfolio may invest in the participatory interests of hedge fund portfolio's in any retail investor collective investment scheme ("Underlying Funds"); and in any other securities (including, without limitation, derivative instruments), financial products and assets, subject to the requirements of the Act read with the Hedge Fund Requirements. The portfolio is permitted to invest in offshore investments. The Manager may create leverage in the Portfolio by borrowing funds, using short positions or engaging in derivative transactions.

INVESTMENT STRATEGY AND MANDATE

The aim of the Portfolio is to achieve consistently superior risk adjusted returns, through exploiting equity based opportunities in South Africa markets. Further the Portfolio aims to exhibit low correlation between its investment performance and that of the market. Whilst it is envisaged that the Underlying Funds will be predominately established and domiciled in South Africa, the Portfolio may, from time to time, subject to applicable exchange control regulations, invest in funds established and domiciled outside of South Africa, where in the opinion of the Investment Manager such funds will ultimately enhance the absolute return of the portfolio. The manager may create leverage in the Portfolio by borrowing funds, using short positions or engaging in derivative transactions.

INVESTMENT RESTRICTIONS AND LIMITS

The Value At Risk approach will be used to calculate total exposure at a 99% confidence level and potential loss over the following month will not exceed 20% of the Portfolio's net asset value.

CONTACT INFORMATION

MANAGEMENT COMPANY

RealFin Collective Investment Schemes (RF) Proprietary Limited	
Registration Number	2013/170284/07

RCIS STABLE EQUITY RETAIL HEDGE FUND

30 June 2024

INVESTMENT COMMENTARY

Market Commentary

Positive momentum continues in global markets, with major indices like the S&P 500 at all-time highs, despite concerns that the Fed might hold rates higher for longer. During the first half of 2024, MSCI World Markets returned +12.0% in US dollars while MSCI EM gained +7.7%.

Gold has also continued its steady climb - up approximately 13% for the year to date — driven by strong demand from central banks, ongoing geopolitical tensions and what looks like Chinese retail investor activity. In some respects, it is puzzling that gold has rallied against traditional headwinds of a strong US dollar and high real interest rates. However, the underlying strength has been reinforced by structural support - namely, the uptrend in economic and geopolitical risks. This is best illustrated by the appetite for gold by central banks, whose pace of purchases increased rapidly soon after the Russian invasion of Ukraine. The geopolitical motivation for many central banks to accumulate gold is likely to persist given a desire to guard against the risk of forex reserve confiscation, or to reduce the US dollar's role in their financial system. Equally important as the intent to raise gold holdings is the capacity to do so. As of Q124, China and India have 5% and 9% of their official reserves in gold, respectively, in contrast to gold representing 71% and 53% of official reserves for the United States and Euro area; illustrating that there is ample room for some central banks to acquire more gold in the coming years.

2024 continues to be the year of elections, with the South African election a key focal point over the last quarter and source of market volatility given the various outcomes that could have emerged. South Africa's ruling African National Congress party (ANC) lost its majority for the first time in 30 years, marking the biggest political shift in the country since the end of apartheid. The ANC suffered a heavy blow at the polls with support dropping to c.40%, from the 57.5% it received in the last election in 2019. The blow to the ANC comes after years of corruption scandals and economic mismanagement. We are encouraged that this dramatic loss of political control by an African liberation party was effected through an open and fair democratic process without violence or voter intimidation and accepted gracefully. The previous official opposition party, the Democratic Alliance (DA), received c.22% of the vote and former President Jacob Zuma's newly formed uMkhonto weSizwe Party (MK) won nearly 15% of the vote, with this outcome driven largely by their regional success in Kwazulu Natal. Following the election outcome the ANC has negotiated a coalition government of several parties – preferring to partner with mostly moderate organisations seen as pragmatic and more business friendly. Encouragingly the riskier outcome of an ANC / EFF coalition was avoided and the eventual confirmation of a Government of National Unity (GNU), that excluded MK and EFF political parties, was well received by the market.

While we are not naïve about the inevitable challenges of actually operating a coalition government (new territory in South Africa) and the likelihood of political differences of perspective causing points of argument, a positive outcome has emerged with the GNU raising the prospect for more market friendly reform, stronger economic growth, faster fiscal consolidation and employment creation.

Portfolio Commentary

In the second quarter of 2024, the JSE Capped SWIX recovered strongly (+8.2%), offsetting the weak Q1 performance (-2.2%). The market-friendly outcome of the Government of National Unity spurred a market rally in June which underpinned the quarterly outcome. The strength was driven by SA Financials (+15.9% for Q2), with SA Industrials (+5.2%) and Resources (+3.6%) lagging. The Stefi composite returned 2.06% during Q224.

The top contributors to the Fund's performance in Q2 were dominated by its domestic holdings, especially domestic financials, led by Absa (+24.6%). Anglo American (+23.9%) was the single largest positive contributor with the share price lifting on the back of BHP's offer for the business – subsequently withdrawn. In addition, exposure to Raubex, a business well placed to benefit from infrastructure spend in SA, also enhanced performance over the period. Their recent FY24 results were strong, and points to a growing pipeline of opportunities which implies continued earnings and cash flow growth over the medium term.

The top detractors over the quarter were short positions in Mr Price, Nedbank and African Rainbow Minerals, but those should be viewed in the context of the Fund's long positions in other counters in their respective sectors.

Current Positioning and Outlook

The business operating environment remained challenging during the first half of 2024.

Inflation, prolonged high interest rates, muted GDP growth and high unemployment continue to place local consumers under pressure. However, as we have communicated in recent reports, we have argued that due simply to base effects the outlook for domestic activity was improving, driven by the non-recurrence of negative factors such as the reduction in the intensity of load-shedding as privately installed solar and alternative energy sources relieved the pressure on Eskom. In reality, Eskom is performing better than we had expected. Lower inflation and interest rate cuts anticipated later this year are additional factors likely to boost consumption in SA and from September onwards we will start to see the once-off boost to be expected from the 2-pot retirement scheme relaxation which will allow households partial access to their retirement savings. These factors inform our domestic retail holdings, with key picks being Shoprite and Pepkor, as well as holdings in several other good quality mid-cap stocks. The Fund also holds exposure to the South African banks, expressed chiefly through Standard Bank and Absa.

Anglo American is our largest resource holding and was subject to a takeover proposal by BHP during the quarter. BHP's offer was rejected by the Anglos board twice and they countered with their own break-up strategy which they argue is expected to unlock greater value for shareholders. Anglos has set out a pathway to accelerate delivery of its strategy to make it a simpler business focused on Copper, Iron Ore (Kumba and Minas Rio) and Crop Nutrients (Woodsmith). Other divisions, including Anglo Platinum, De Beers, and their coal assets will be demerged or divested. We have owned Anglos as we felt that the firm's market cap did not reflect the full value of all its component assets. BHP's offer demonstrates this underappreciated value, and we think over time a simpler, more focused business (with >50% copper exposure) will be a very attractive investment for our clients (and possible future suitors). In addition to the restructuring, the combination of lower policy rates around the world, strengthening global growth and a weaker US dollar could lead to a lift in commodity prices later this year underpinning the near-term investment case.

Despite the recent lift in domestic equities fueled by the positive election outcome, the SA market continues to trade at attractive levels relative to other comparable markets. While we expect bumps in the road of coalition government the GNU certainly raises the prospect for this to occur and we are in a better position to possibly succeed than at any time since 2008!

ADDITIONAL RISK DISCLOSURES - AS AT QUARTER ENDED 30 JUNE 2024

As required in terms of Section 27 of Board Notice 52. Any questions pertaining to the technical nature of the disclosures may be directed to clientservices@realfin.co.za

RISK METRICS	
Leverage:	The providers of leverage are the fund's prime broker(s) and the JSE through its listed derivatives platform.
VAR (limit 20%):	8.00%
Max VAR for quarter:	11.09%
Assets encumbered as collateral:	100.00%
Re-hypothecated assets:	Re-hypothecation of the fund's assets is prohibited.
Changes in liquidity:	The fund's redemption period remained unchanged.
Stress testing:	Stress testing was conducted to assess the fund's sensitivity to stressed market conditions.

DEFINITIONS & METHODOLOGIES

Collateral - Collateral is the placement of an asset with a counterparty in order to secure an obligation.

Counterparty exposure - Counterparty (credit) exposure represents the potential loss the Fund would experience in the event a counterparty defaults on its obligations.

Leverage - Leverage is a strategy used to increase the Fund's exposure beyond the capital employed.

Re-hypothecated assets - Re-hypothecation is the re-use of collateral by the prime broker.

Stress Testing - To assess the Fund's sensitivity to various market conditions, stress scenarios are created by simulating the impact of historic financial crises, increasing investor repurchase levels and decreasing liquidity of the fund's underlying assets.

VAR - Value at risk (VAR) is a statistical measure of a fund's financial risk over a specific period. VAR is calculated using historical data to determine the maximum potential loss over a month, 99% of the time.

MINIMUM DISCLOSURE DOCUMENT

REALFIN
collective investments

IMPORTANT INFORMATION

RealFin Collective Investment Schemes (RF) Proprietary Limited ("RCIS") is registered and approved by the Financial Sector Conduct Authority (FSCA) as a manager of Collective Investment Schemes approved in terms of the Collective Investment Schemes Control Act. This document is for information purposes only and does not constitute or form part of any offer to issue or sell or any solicitation of any offer to subscribe for or purchase any particular investments. The information contained in the MDD does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act, and should be read in conjunction with the RCIS Fund Information Document which can be found on the RCIS website www.realfin.co.za. Opinions expressed in this document may be changed without notice at any time after publication. We therefore disclaim any liability for any loss, liability, damage (whether direct or consequential) or expense of any nature whatsoever which may be suffered as a result of or which may be attributable directly or indirectly to the use of or reliance upon the information.

DISCLOSURES

- Collective Investment Schemes are generally medium-to long-term investments.
- The **RCIS Stable Equity Retail Hedge Fund** should be considered an investment with a time horizon of longer than a year.
- The value of participatory interests (units) may go down as well as up.
- Past performance is not necessarily a guide to future performance.
- Where different classes of participatory interests apply to certain Portfolio's, they would be subject to different charges.
- Collective investments are traded at ruling prices and can engage in borrowing and scrip lending.
- A schedule of fees and charges and maximum commissions, is available on request from RCIS.
- RCIS does not provide any guarantee in respect to the capital or the return of the portfolio.
- RCIS may suspend repurchases for a period, subject to regulatory approval, to await liquidity.
- RCIS may borrow up to 10% of the market value of the portfolio where insufficient liquidity exists in a portfolio, or where assets cannot be released to withdraw or cancel participatory interests.
- RCIS reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate.
- Forward pricing is used.
- In terms of the Collective Investment Schemes Control Act, No.45 of 2002 (CISCA), RMB Custody and Trustee Services (A division of FirtRand Bank Limited) has been appointed by RCIS as the Trustee of **RCIS Stable Equity Retail Hedge Fund**.
- The portfolio is valued **each business day**.
- Investment and Redemption Instructions will be processed according to: The transaction cut-off time as well as the Subscription and Redemption guidance stipulated within the General Information section of the Minimum Disclosure Document.
- Any capital gain realised on the disposal of a participatory interest in a collective investment scheme is subject to Capital Gain Tax (CGT).
- A money market portfolio is not a bank deposit account. The price of a participatory interest is a marked-to-market value. The total return to the investor is made up of interest received and any gain or loss made on any particular instrument, in most cases the return will merely have an effect of increasing or decreasing the daily yield. In the case of abnormal losses it can have the effect of reducing the capital value of the portfolio. Excessive withdrawals from a money market portfolio may place the portfolio under liquidity pressure and in such circumstances a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed.
- Where foreign securities are included in a portfolio, this may impose potential constraints on liquidity and the repatriation of funds. The portfolio can be impacted by macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks and potential limitations on the availability of the market information. Fluctuations or movements in exchange rates may cause the value of underlying offshore investments to go up or down.
- A Fund of Funds Portfolio only invests in other portfolio's of collective investment schemes which levies its own charges, which could result in a higher cost structure for these portfolios.
- RealFin Collective Investment Schemes (RF) Proprietary Limited has entered into a co-naming agreement with and delegated the investment management function to **Abax Investments Proprietary Limited (FSP 856)**
- RCIS retains full legal responsibility for **RCIS Stable Equity Retail Hedge Fund** and performs Risk Management oversight.
- Application forms can be obtained via the RCIS website www.realfin.co.za and any additional information can be requested from RCIS at manco@realfin.co.za
- The RCIS complaints policy is available on the RCIS website www.realfin.co.za
- RCIS has a Conflict of interest policy, Protection of Personal Information Policy and Treating Clients Fairly Policy which is available on request.
- Annual report is available upon request.

HEDGE FUND RISK DISCLOSURE

The risks and characteristics within represent some of the more general risks and characteristics prevalent in hedge fund portfolios. The list below should not be seen as exhaustive. As more risks and characteristics are identified that were not initially mentioned, these will, as they become more prevalent, be included herein.

Investment strategies may be inherently risky - Hedge fund strategies may include leverage, short-selling and short-term investments. In addition, hedge fund portfolios often invest in unlisted instruments, low-grade debt, foreign currency and other exotic instruments. All of these expose investors to additional risk. However, not all hedge fund managers employ any or all of these strategies and it is recommended that investors consult their advisors in order to determine which strategies are being employed by the relevant manager and which consequent risks arise.

Leverage usually means higher volatility - Hedge fund managers may use leverage. This means that the hedge fund manager borrows additional funds, or trades on margin, in order to amplify his investment decisions. This means that the volatility of the hedge fund portfolio can be many times that of the underlying investments. The degree to which leverage may be employed in any given hedge fund portfolio will be limited by the mandate the client has with the manager. The limits laid down by the mandate should be carefully reviewed in making an investment decision.

Short-selling can lead to significant losses - Hedge fund managers may borrow securities in order to sell them short, in the hope that the price of the underlying instrument will fall. Where the price of the underlying instrument rises, the client can be exposed to significant losses, given that the manager is forced to buy securities (to deliver to the purchaser under the short sale) at high prices.

Unlisted instruments might be valued incorrectly - Hedge fund managers may invest in unlisted instruments where a market value is not determined by willing buyers and sellers. The hedge fund manager may have to estimate the value of such instruments, and these estimates may be inaccurate, leading to an incorrect impression of the fund's value. Investors should ensure that objective valuations are performed for all instruments in a portfolio and that the manager utilises the services of a competent administrator.

Fixed income instruments may be low-grade - Hedge fund managers may invest in low-grade bonds and other fixed interest investments. These investments are more likely to suffer from defaults on interest or capital. They are also more likely to have volatile valuations when the market changes its view on credit risk. The mandate should also limit the extent (i.e. lowest acceptable rating and maximum percentage exposure) to which low-grade debt can be acquired by the client. Investors should review the mandate to gain an appreciation of the maximum possible exposure applicable to the relevant mandate.

Exchange rates could turn against the fund - A hedge fund manager might invest in currencies other than the base currency. For example, a South African hedge fund manager might invest in UK or US shares. The portfolio is therefore exposed to the risk of the rand strengthening or the foreign currency weakening.

Other complex investments might be misunderstood - In addition to the above, hedge fund managers might invest in complex instruments such as, but not limited to, futures, forwards, swaps, options and contracts for difference. Many of these will be derivatives, which could increase volatility. Many will be "over-the-counter", which could increase counterparty risk. Many exotic instruments may also be challenging for the manager to administer and account for properly. Investors should inquire into how these instruments are objectively and independently valued.

The client may be caught in a liquidity squeeze - Given their often short-term nature, hedge fund managers need to be able to disinvest from or close certain positions quickly and efficiently. But market liquidity is not always stable, and if liquidity were to decrease suddenly, the hedge fund manager might be unable to disinvest from or close such positions rapidly or at a good price, which may lead to losses.

The prime broker or custodian may default - Hedge fund managers often have special relationships with so-called "prime" brokers. These are stockbrokers that provide the required leveraging and shorting facilities. Prime brokers usually require collateral for these facilities, which collateral is typically provided using assets of the relevant client, and consequently such collateral might be at risk if the prime broker were to default in some way. A similar situation could occur with the custodian of the client's funds.

TRANSACTION CUT-OFF TIMES

In order for an **Investment Instruction** to be processed, your Investment form must be sent **before 12h00 on each business day** ("Cut Off Date") for your Investment application to be processed on the **current business day**. Your funds need to be reflecting in our bank account **before 12h00** ("Cut off") on the **current business day** and proof of payment sent to clientservices@realfin.co.za. Any funds received after the Cut Off shall be retained by the Manager in a separate account and shall be invested (together with any interest which has accrued thereon) on the next available business day.

In order for your participatory interests in the Portfolio to be redeemed at the relevant request date ("**Redemption Date**"), your Redemption instruction must be submitted to RCIS **before 12h00 on the current business day** ("**Cut Off**") for your investment to be transacted at the current day's price. All redemptions must be submitted in writing and will be executed following receipt and acceptance of such instruction. Please note in the case of daily traded Hedge Fund redemptions, settlement may take up to **5 business days**.

Investors wishing to redeem units amounting to more than 5% of the total market value of the relevant portfolio must provide the manager with at least 7 business days' written notice of such redemption. If this notice is not received by the manager, the manager may treat such withdrawal as only having taken place on the 7th business day after such instruction is received. However, where the amount to be redeemed exceeds 10% of the total market value of the portfolio, the parties shall determine the actual date of withdrawal through mutual agreement between them.

PERFORMANCE CALCULATION

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Performance has been calculated using NAV to NAV figures with actual portfolio ongoing fees taken into account. Income is reinvested at the reinvestment date. Different classes of participatory interests apply to these portfolio's and are subject to different fees and charges. Actual Investment performance will differ based on the initial advice fee, ongoing advice fee, investment date, the date of reinvestment of distributions and dividend withholding tax. Initial advice fees have not been taken into account. Cumulative performance figures are calculated using lump sum investment amounts. Income distributions, prior to the deduction of applicable taxes, are included in the performance calculation. Performance calculations are available on request from RCIS.

PERFORMANCE FEES

Performance fees shall be calculated separately for each class at each Valuation Point. Performance fees are accrued and are payable at the end of the relevant Performance Fee Measurement Period. The calculation is based on whether the respective Class has achieved a return greater than the Fee Hurdle and where applicable, above the high watermark. A detailed description of how performance fees are calculated and applied for this portfolio is available on request from RCIS.

TER

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Calculations are based on actual data where possible and best estimates where actual data is not available.

TC

Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Regulations could change - Legal, tax and regulatory changes could occur during the term of the investor's investment in a hedge fund portfolio that may adversely affect it. The effect of any future legal, tax and regulatory change or any future court decision on a hedge fund portfolio could be substantial and adverse.

Past performance might be theoretical - Hedge fund portfolios are on occasion marketed using theoretical or paper track records. Past performance is seldom a reliable indicator of future performance. Theoretical past performance is often an even less reliable indicator, and investors should place a lower significance on these.

The manager may be conflicted - The hedge fund manager might be managing other hedge fund portfolios or other traditional investment funds. The investor should ensure that sufficient controls are in place to manage any conflicts of interest between the different funds.

Hedge fund structures are often complex - As mentioned above, hedge fund structures are not fully regulated and they are often housed in legal structures not originally meant for pooled hedge funds, for example partnerships and companies. Given the many risks listed above, investors need to ensure that any structure is robust enough to contain any unlimited losses.

Manager accountability may be vague - Hedge fund portfolios are often managed by specific individuals and investors should ensure that sufficient controls are in place for the times when the manager is being covered for by colleagues. In addition, a hedge fund structure (for example, a fund of funds) and its managers or advisors may rely on the trading and/or investing expertise and experience of third-party managers or advisors, the identity of which may not be disclosed to investors. This constitutes an additional risk for investors, which they must take into account.

Fees might be high - Hedge fund structures' fees may be significantly higher than the fees charged on traditional investment hedge funds. Investments should be made only where the potential returns justify the higher fees.

Fees might be performance-based - Hedge fund manager's fees are usually performance-based. This means that the managers typically get a higher fee when their portfolios outperform specified performance targets, which might lead to riskier positions being taken. Investors need to ensure that performance fees allow for a fair sharing of both the good and the bad.

Transaction costs might be high - Given the often short-term nature of investment positions, hedge fund portfolios are often traded more aggressively. This implies more stockbroking commission and charges being paid from the portfolio, which is ultimately for the client's account. Again, investments should be made only where the potential returns make up for the costs.

Transparency might be low - A hedge fund manager's performance is often the result of unique proprietary strategies or contrarian investment positions. For obvious reasons, managers will want to keep these confidential. Managers are therefore less likely to disclose trades to their investors, and holdings might be disclosed only in part or with a significant delay.

Dealing and reporting might be infrequent - A hedge fund manager's performance can often be disturbed by irregular cash flows into or out of the hedge fund structure. For this reason, hedge fund managers often limit the frequency of investments and withdrawals. Similarly, the manager may choose to report infrequently on performance and other statistics. Investors should ascertain, prior to investing, the nature and frequency of reporting.

Withdrawals might not be easy - As mentioned above, the frequency of withdrawals might be limited to monthly or quarterly dates. In addition, the manager may impose notice periods or lock-ins in order to ensure that they have the necessary time for their investment positions to deliver their desired returns.
