# 31 March 2025

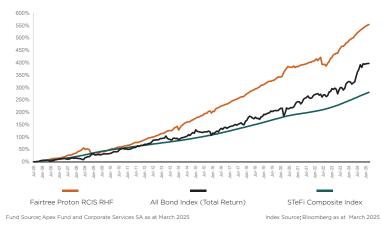

### Fund Profile

The Fairtree Proton RCIS RHF aims to provide superior risk-adjusted returns over and above cash, irrespective of market conditions. The fund has a targeted return of cash plus 6% over a rolling 3-year period.

## Portfolio Strategy and Mandate

The portfolio is managed by balancing fixed income relative value exposures with credit exposures, in a way that minimises market risk and allows the portfolio to achieve its targeted return over the medium term. We believe that the markets are not always efficient and therefore present mispriced assets which can be taken advantage of to generate excess returns. A disciplined approach to fundamental and quantitative analysis helps to identify these mispriced assets. We believe that a team-based fundamental approach to the valuation of assets, combined with cutting-edge quantitative techniques in portfolio construction and risk management help build a fund to achieve the objectives of superior risk -adjusted returns. The manager may create leverage in the Portfolio by borrowing funds, using short positions or engaging in derivative transactions.

## **Cumulative Performance Since Inception**

The investment performance is for illustrative purposes only; the investment performance is calculated by taking the actual initial fees and all ongoing fees into account for the amount shown; assuming income is reinvested on the reinvestment date.

## Market Commentary

### Market dynamics:

European credit markets wilted during March, with the credit benchmark iTraxx XOver 5-year Spread Index increasing by some 41 basis points (bps) to end the month at 330 bps. Series 43 was launched on the 20th, which extended the tenor and increased the risk of the on-the-run index by around 10 bps, so one could argue the real sell-off was only 31 bps. But it's still a nasty outcome. In fact, one must go back to September 2022 to find a sell-off that was bigger in absolute magnitude than that witnessed in March. The backdrop was poor, with risk sentiment changing as markets began discounting the effects of the impending and probable so-called Tariff Wars that were due to commence in early April. The Total Return Index lost some 1.30%, doing its best to erase the lion's share of its heretofore 2025 gains. The index has pared back its year-to-date (YTD) performance to a meagre 0.37%, not a number that will blow your hair back.

There's always some good news, and looking at defaults and recovery auctions, March remained default-free, according to Markit, with no recovery auctions taking place or scheduled for the near term. There have been no meaningful defaults in 2025, with the last major default occurring in November last year. Perhaps what we are merely witnessing is an increase in risk aversion or required risk premium rather than a complete reassessment of increased probabilities of capital losses due to defaults. That may sound underwhelming, but in the absence of a meaningful pick-up in default rates, spread levels above 350 bps appear quite attractive and we will certainly look to pick up some risk into that sort of sell-off.

The South African Bond market continued to struggle during March, with the long bonds selling off by around 20 bps. The All Bond Index delivered a rather disappointing 0.19% during the month, and given base effects, the year-on-year number will probably decline from its current level of 20.16%. If we look back at April, May and June 2024, the ALBI produced 1.37%, 0.75% and 5.24%, respectively. These will be difficult numbers to replace.

Short rates remained largely unchanged, though, after the Monetary Policy Committee (MPC) decided to leave the repo rate at 7.50% at their meeting on the 20th. As was highlighted last month, the market expectations as far as the extension of the cutting cycle were pared back, particularly after the headline CPI year-on-year printed 3.2%, approximately 0.4% higher than its low from October last year. It remains problematic for the SARB to cut rates into a rising, although low, inflation environment. One could argue that the opportunity to cut more aggressively, in 50 bps increments, has been lost now and that perhaps the repo should be around 50 bps lower than where it currently is. The problem is that real rates are probably too high, but those real numbers will diminish as domestic inflation inevitably picks up. We believe that the next major move in interest rates will be higher, and rates should start increasing from probably Q4 2026 or Q1 2027.

#### Performance:

The Fund delivered 0.48% during the month, underperforming STeFI by 0.16% after fees. This was, again, a rather disappointing outcome as we seem to have missed the sell-off in long bonds. We have started increasing risk to the two-year swap bucket, but we are running a short position there. Unfortunately, the sell-off in long bonds was not replicated in two-year swaps, which rallied by 5 bps or so over the month. However, an innings in test cricket is built in time; it certainly does not help to swing for the fences at every ball.

Looking to April, perhaps the smokescreen of US tariffs will eventually disperse, leaving the market to ponder about the Government of National Unity (GNU) and what we are left with there. One would think that the political powers are thanking their lucky stars for what's going on globally.

Please Note: The above commentary is based on reasonable assumptions and is not guaranteed to occur, unless it has already happened.

Policy which is available on request. 25. Annual report and Actual annual figures are available to the investor upon request. 26. Prices are available on a T +1 basis via Finswitch.

Investment strategies may be inherently risky - Hedge fund strategies may include leverage, short-selling and short-term investments. In addition, hedge fund portfolios often invest in unlisted instruments, low-grade debt, foreign currency and other exotic instruments. All of these expose investors to additional risk. However, not all hedge fund managers employ any or all of these strategies and it is recommended that investors consult their advisors in order to determine which strategies are being employed by the relevant manager and which consequent risks arise. Leverage usually means higher volatility - Hedge fund managers may use leverage. This means that the hedge fund manager borrows additional funds, or trades on margin, in order to amplify his investment decision. This means that the volatility of the hedge fund portfolio can be many times that of the underlying investments. The degree to which leverage may be employed in any given hedge fund portfolio will be limited by the mandate the client has with the manager. The limits laid down by the mandate should be carefully reviewed in making an investment decision. Short-selling can lead to significant losses - Hedge fund managers may borrow securities in order to sell them short, in the hope that the price of the underlying instrument will fall. Where the price of the underlying instrument wites, the client can be exposed to significant losses, given that the manager is forced to buy securities (to deliver to the purchaser under the short sale) at high prices. Unlisted instruments may be low-grade - Hedge fund managers may invest in unlisted instruments where a market value is not determined by willing buyers and sellers. The hedge fund manager may have to estimate the value of such instruments, and these estimates may be inaccurate, leading to an increte impression of the fund's value. Investors should ensure that objective valuations are performed for all instruments in a portfolio and that the manager ullises the services of a competent administrot.

manager to administer and account for properly. Investors should inquire into how these instruments are objectively and independently valued. The client may be caught in a liquidity squeeze - Given their often short-term nature, hedge fund managers need to be able to disinvest from or close certain positions quickly and efficiently. But market liquidity is not always stable, and if liquidity were to decrease suddenly, the hedge fund manager might be unable to disinvest from or close such positions rapidly or at a good price, which may lead to losses. The prime broker or custodian may default - Hedge fund managers often have special relationships with so-called "prime" brokers. These are stockbrokers that provide the required leveraging and shorting facilities. Prime brokers usually require collateral for these facilities, which collateral is typically provided using assets of the relevant client, and consequently such collateral might be urisk if the prime broker were to default in score with the euterdian of the client's fund. some way. A similar situation could occur with the custodian of the client's funds

#### Transaction Cut-Off Times

#### TRANSACTION OUT-OFF TIMES

RANSALTION COTOT TIMES In order for a daily Investment instruction to be processed, your Investment form must to be sent before "2hOC on each business day ("Cut Off Dete") for your Investment application to be processed on each business day. Your funds need to be reflecting in our bank account bcfore "2hOC ("Cut Off") on the oach business cay of the preceding month and proof of payment sent to diontsory cos@realf.ncoze. Any funds received after the Cut Off shall be retained by the Manager in a separate account and shall be invested (together with any interest which has accrued thereon) on the next available Investment Date.

your participatory interests in the Portfolio to be redeemed at the relevant request date  $\eta$  Date's your Redemption instruction must be in by 210C on each business cay for ("Recomption Date"), your Redemption i processing at the ond of each business day.

Hedge fund redemptions are processed at the end of each day. All redemptions must be submitted in writing and will be executed following receipt and acceptance of such instruction. Please note in the case of Daily redemptions, settlement may take up to  $\exists$  business days

#### PERFORMANCE CALCULATION

PERFORMANCE CALCULATION CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Performance has been calculated using NAV to NAV figures with actual portfolio ongoing fees taken into account. Income is reinvested at the reinvestment date. Different classes of participatory interests apply to these portfolio's and are subject to different fees and charges. Actual Investment performance will differ based on the initial advice fee, ongoing advice fee, investment date, the date of reinvestment of distributions and dividend withholding tax. Initial advice fees have not been taken into account. Cumulative performance figures are calculated using lump sum investment amounts. Income distributions, prior to the deduction of applicable taxes, are included in the performance calculation. Performance calculations are available on request from RCIS.

#### PERFORMANCE FEES

#### 'ER

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Calculations are based on actual data where possible and best estimates where actual data is not available.

Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. Its should not be considered in isolation as returns may be impacted by many factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Regulations could change - Legal, tax and regulatory changes could occur during the term of the investor's investment in a hedge fund portfolio that may adversely affect it. The effect of any future legal, tax and regulatory change or any future court decision on a hedge fund portfolio could be substantial and adverse. Past performance might be theoretical - Hedge fund portfolios are on occasion marketed using theoretical or paper track records. Past performance is seldom a reliable indicator of future performance. Theoretical past performance is often an even less reliable indicator, and investors should place a lower significance on these.

performance is often an even less reliable indicator, and investors should place a lower significance on these. The manager may be conflicted - The hedge fund manager might be managing other hedge fund portfolios or other traditional investment funds. The investor should ensure that sufficient controls are in place to manage any conflicts of interest between the different funds. Hedge fund structures are often complex - As mentioned above, hedge fund structures are not fully regulated and they are often housed in legal structures not originally meant for pooled hedge funds, for example partnerships and companies. Given the many risks listed above, investors need to ensure that any structure is robust enough to contain any unlimited losses. Manager accountability may be vague - Hedge fund portfolios are often managed by specific individuals and investors should ensure that sufficient controls are in place for the times when the manager is being covered for by colleagues. In addition, a hedge fund structure (for example, a fund of funds) and its managers or advisors may rely on the trading and/or investing expertise and experience of third-party managers or investors, which they must take into account. Fees might be high - Hedge funds. Investments hould be made only where the potential returns justify the traditional investment hedge funds. Investments should be made only where the potential returns justify the

traditional investment hedge funds. Investments should be made only where the potential returns justify the higher fees

traditional investment hedge funds. Investments should be made only where the potential returns justify the higher fees. Fees might be performance-based - Hedge fund manager's fees are usually performance-based. This means that the managers typically get a higher fee when their portfolios outperform specified performance targets, which might lead to riskier positions being taken. Investors need to ensure that performance fees allow for a fair sharing of both the good and the bad. Transaction costs might be high - Given the often short-term nature of investment positions, hedge fund portfolios are often traded more aggressively. This implies more stockbroking commission and charges being paid from the portfolio, which is ultimately for the client's account. Again, investments should be made only where the potential returns make up for the costs. Transparency might be low - A hedge fund manager's performance is often the result of unique proprietary strategies or contrarian investment positions. For obvious reasons, managers will want to keep these confidential. Managers are therefore less likely to disclose trades to their investors, and holdings might be by irregular cash flows into or out of the hedge fund manager's performance can often be disturbed by irregular cash flows into or out of the hedge fund sacrtain, prior to investing, the nature and frequenty on performance and other statistics. Investors should ascertain, prior to investing, the nature and frequency of rowntha singlich to be asy - As mentioned above, the frequency of inderdawals might to be easy - As mentioned above, the frequency of inderdawals might host be easy - As mentioned above, the frequency of olck-ins in order to ensure should ascertain, prior to investing, the nature and frequency of rowntha's might host be easy - As mentioned above, the frequency of lock-ins in order to ensure that they have the necessary time for their investment positions to deliver their desired returns. returns.
